NOAH Multi-hazard Map is composed of a combination of landslide, flood, and storm surge hazards maps. Landslide hazard map identifies areas that may be affected by landslides. Floods were simulated at a 100-year return period scenario, and storm surge simulation was based on maximum storm tide heights of 5 meters.

Legend
- Evacuation
- Residential
- Evacuation Route
- Municipal Boundary
- Roads
- Tsunami (READY Project)
- Tsunami Hazard

NOAH Multi-hazard* 
- Low
- Medium
- High

Liquefaction (READY Project) 
- High Susceptibility
- Moderate Susceptibility
- Low Susceptibility

*NOAH Multi-hazard Map is a combination of landslide, flood, and storm surge hazard maps. Its landslide hazard map, predicted at a 100-year return period, was based on maximum storm tide heights of up to 5 meters. Floods were simulated at a 100-year return period scenario.
