NOAH Multi-hazard Map is composed of a combination of landslide, flood, and storm surge hazards maps. Landslide hazard map identifies areas that may be affected by landslides; flood maps were generated at a 100-year rain return scenario; and storm surge simulation was based on maximum storm tide heights of 5 meters.

An NOAH Multi-hazard Map at barangay level indicates flood, river storm surge hazard maps. The landslide hazard map identifies areas prone to landslides; flood maps were generated at a 100-year rain return scenario; and storm surge simulation was based on maximum storm tide heights of 5 meters.
