NOAH Multi-hazard Map is composed of a combination of landslide, flood, and storm surge hazards maps. landslide hazard map identifies areas that may be affected by landslides; floods were simulated at a 100-year rain return scenario; and storm surge simulation was based on maximum storm tide heights of 5 meters.

An NOAH Multi-hazard Map is a combination of landslide, flood, and storm surge hazard maps. The landslide hazard map identifies areas that may be affected by landslides. Floods were simulated at a 100-year rain return scenario. Storm surge simulation was based on maximum storm tide heights of 5 meters.
