The NOAH Multi-hazard Map is composed of a combination of landslide, flood, and storm surge hazard maps. The landslide hazard map identifies areas that may be affected by landslides; floods were simulated at a 100-year rain return scenario; and storm surge simulation was based on maximum storm tide heights of 5 meters.

NOAH Multi-hazard Map by International Organization for Migration (IOM) and the United Nations Office for the Coordination of Humanitarian Affairs (OCHA) under the IOM Multi-Hazard Project in the Philippines.
