NOAH Multi-hazard Map is composed of a combination of landslide, flood, and storm surge hazards maps. Landslide hazard map identifies areas that may be affected by landslides; floods were simulated at a 100-year rain return scenario; and storm surge simulation was based on maximum storm tide heights of 5 meters.

Data Sources:
- National Mapping Resources and Information Authority
- National Operational Assessment of Hazards

Legend:
- Evacuation
- Residential
- Evacuation Route
- Barangay Boundary
- Municipal Boundary
- Roads
- Tsunami (READY Project)
- Tsunami Hazard
- NOAH Multi-Hazard

Notes:
- Low susceptibility to high susceptibility
- Low return period to 100-year return period
- Tsunami hazard map developed under the National Disaster Risk Reduction Program
- Tsunami hazard map developed under the National Disaster Risk Reduction Program
