  - High
- Liquefaction (READY Project)
  - High Susceptibility
  - Moderate Susceptibility
  - Low Susceptibility

NOAH Multi-hazard Map is composed of a combination of landslide, flood, and storm surge hazard maps. Landslide hazard map identifies areas that may be affected by landslides; floods were simulated at a 100-year rain return scenario, and storm surge simulation was based on maximum storm tide heights of 5 meters.

Data Sources:
1. Nationwide Operational Assessment of Hazards
2. National Mapping Resources and Information Authority

*NOAH Multi-Hazard: Model developed by the USGS and partners, including the USGS Pacific Coastal & Offshore Science Center.
