Since 2008, the collection of data on migration in EU countries has been based on EU Regulation 0862/2007. This defines a core set of statistics on international migration flows, foreign population stocks, the acquisition of citizenship, asylum and measures against illegal entry and stay. Although Member States continue to use appropriate data according to national availability and practices, the statistics collected under the Regulation must be based on common definitions and concepts.

IOM defines irregular migration as Movement taking place outside the regulatory norms of the sending, transit and receiving country Boundaries indicated on map do not imply official endorsement or acceptance by IOM. 10/07/15.
